New York Giants Offense: Scouting Report

Public data. Built from nflverse (nflfastR play-by-play, NGS participation, FTN charting), mapped onto the PFF GamePBP layout. Run concepts, PFF success codes, yards after contact and receiver alignment are not in this source; see *What nflverse cannot cover* at the end.

Key findings

TENDENCIES

- Passes on 58% of all plays and 51% of neutral early-down plays (1st/2nd down, outside 2-minute drills).
- QB alignment is a strong run/pass key: under center they run 71% of the time (n=192); in shotgun they pass 80% (n=306).
- Pistol is a real part of the menu: 17 plays, 6% pass.
- Tell: 3rd Down + Medium (4-6) → pass 100% of the time (n=20, 95% lower bound 84%).
- Tell: 3rd Down + Long (7-10) → pass 95% of the time (n=37, 95% lower bound 82%).
- Tell: 3rd Down + Extra Long (11+) → pass 96% of the time (n=26, 95% lower bound 81%).
- Tell: Shotgun + 3rd Down → pass 85% of the time (n=101, 95% lower bound 77%).
- Run game is built on Middle and Left Guard: 45% of carries.
- Predictability: knowing personnel, alignment, down and distance lifts a defense's run/pass guess from 58% to 79% (leave-one-out).

STRENGTHS

- Most efficient run gap: Left End, +0.10 EPA/carry, 5.1 YPC, 56% success (n=27).
- Primary target: M. Nabers (#1) (WR), 30% target share, 53 catches for 648 yards, +0.23 EPA/target, 29 first downs.
- Most efficient receiver: T. Tracy Jr. (#29) (HB), +0.64 EPA/target on 7 targets, aDOT 0.6, 10.8 YAC/rec.
- Lead back C. Skattebo (#44): 46% of carries, 4.3 YPC, 46% success. Favorite gap: Middle.
- Most total value: M. Nabers (#1), 18.1 total EPA on 78 touches + targets (648 scrimmage yards).
- Deep shots (20+ air yards): 16% of targets, 39% complete, +0.59 EPA/target (n=41).

VULNERABILITIES

- Play action: 21% of dropbacks, -0.05 EPA/play vs +0.12 without (n=63 vs 238).
- Least efficient run gap: Right Tackle, -0.56 EPA/carry, stuffed (0 or fewer yards) on 31% (n=16).
- On 3rd and Extra Long (11+) they convert only 23% (n=26); they pass 96% of the time there. Overall 3rd-down conversion: 42%.

n = the number of plays (or carries / targets) behind a number, i.e. the sample size. Findings are generated by fixed rules (see Methodology) and include sample sizes. Treat any rate built on fewer than 10 plays as anecdotal.

3. QB alignment tendencies

Run/pass split by QB alignment

n = number of plays from that alignment; read small groups with caution

Data: nflverse (nflfastR pbp, NGS participation, FTN charting)

Alignment by personnel (groupings with enough plays):

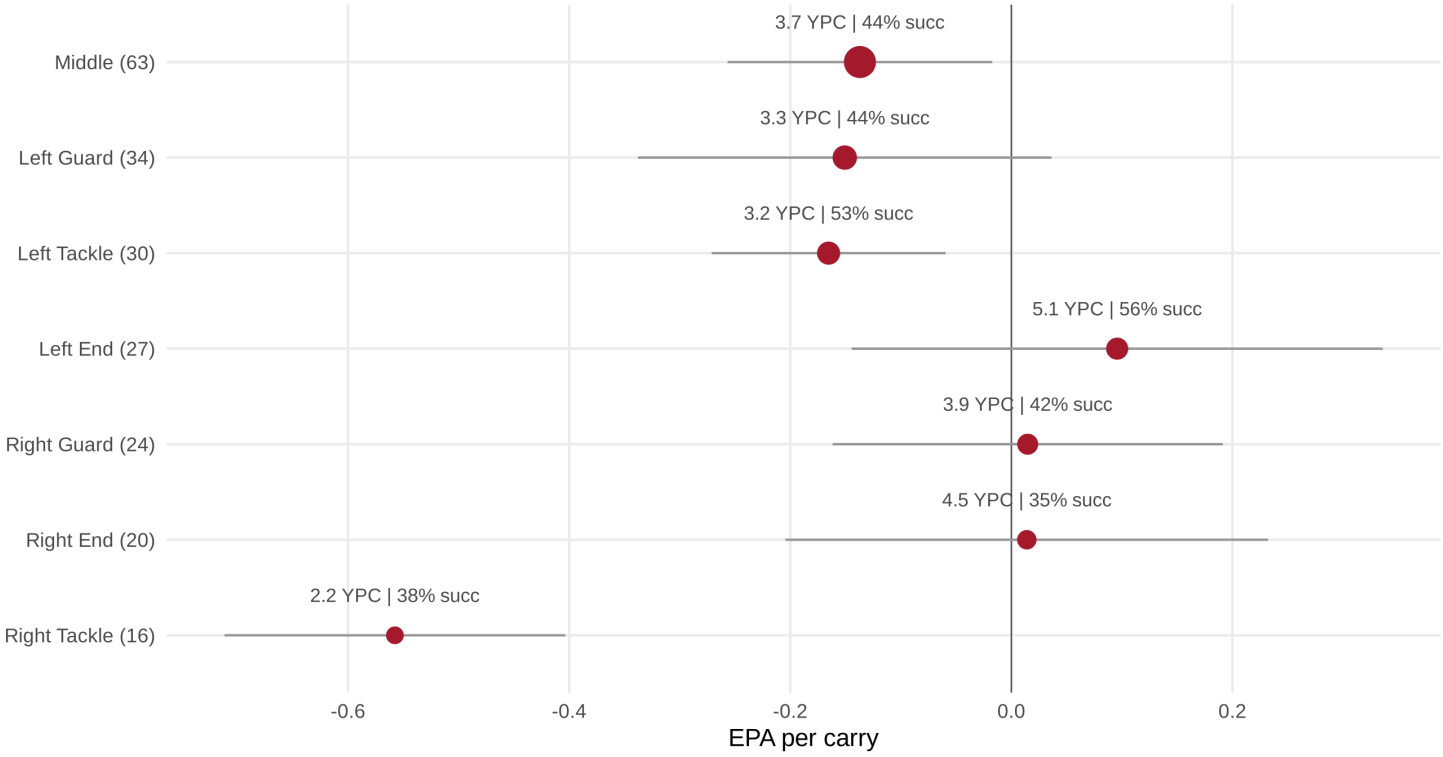

Not available for this data set.

4. Run gap and direction: frequency and effectiveness

nflverse does not chart blocking schemes, so runs are grouped by the gap and side the play-by-play records (end / tackle / guard / middle). This answers *where* they run, not *which concept*.

Run gap and direction: volume and efficiency

Ordered by carries (in brackets). Point = EPA per carry, bar = +/- 1 standard error

How receivers produce: depth of target vs. yards after catch

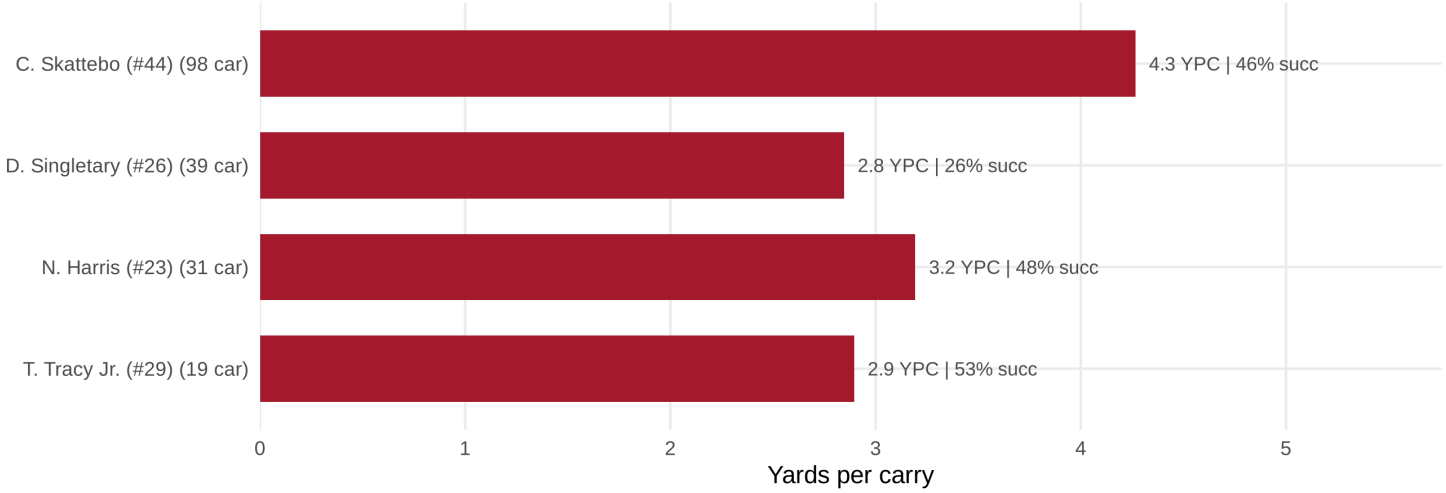

Right = targeted deeper downfield; up = more yards after the catch. Dashed = team medians

Data: nflverse (nflfastR pbp, NGS participation, FTN charting)

Rushers: yards per carry

Yards after contact is not in this data source, so carries are not split

8. Pre-snap tells and predictability

Strongest pre-snap tells

Dot = observed rate; faded bar runs down to the 95% lower bound; n = plays with that cue

Data: nflverse (nflfastR pbp, NGS participation, FTN charting)

Always guessing the more common play type is right **58%** of the time. Using personnel, alignment, down and distance bucket (leave-one-out cell rates) is right **79%** of the time, a lift of **21%**.

Methodology and data notes

How the sample was built

Step	Plays
Offensive snaps in file	579
Run or pass plays (drops penalties / no-plays)	527
Downs 1-4 (drops PATs / 2-pt tries)	527
Excluding garbage time	527
Excluding QB kneels and spikes	515

WHAT NFLVERSE CANNOT COVER (OR ONLY APPROXIMATES)

- Personnel / formation / coverage / routes: nflverse participation data covers only 0% of these plays (it is typically posted after the season), so those sections are mostly empty.
- Run concepts: nflverse has no blocking-scheme charting (inside zone, duo, power ...). Section 4 groups runs by gap and direction instead (e.g. 'Left Tackle', 'Middle').
- PFF success codes (pff_OFFSUCCESS): not in nflverse. Success uses the standard 40/60/100 yardage rule only.
- EPA / EP: nflfastR's public model, not PFF's. Values are close in spirit but not identical.
- Yards after contact: not in nflverse, so the before/after-contact split for rushers is unavailable (yards per carry is shown instead).
- Receiver alignment (slot / wide / backfield): not in nflverse. 'Main align' is blank.
- Personnel is counted from the roster positions of the 11 players on the field (RB+FB, TE). A WR listed as TE on the roster counts as a TE. '(*)' = 6+ offensive linemen.
- Garbage time is approximated with win probability (second half, pre-snap WP below 0.01% or above 99.99%). Calibrated against a licensed PFF sample.
- 2-minute flag: inside the final 2:00 of either half (PFF's 4-minute flag has no equivalent).
- Pressure is NGS 'was_pressure' (yes/no); time to pressure is not available.

Column names below refer to the PFF GamePBP layout the nflverse data was mapped onto.

- **Pass play / dropback:** `pff_RUNPASS = "P"`, which includes sacks and QB scrambles. **Run:** `"R"`. Penalties and no-plays (`"X"`) are removed.
- **QB alignment:** Pistol if `pff_PISTOL` is set, otherwise Shotgun if `pff_SHOTGUN` is set, otherwise Under Center.
- **Success (standard):** gaining at least 40% of the distance on 1st down, 60% on 2nd, and 100% on 3rd/4th, or earning a first down. PFF success codes are not in nflverse, so only the standard rule is used.
- **First down:** `pff_FIRSTDOWNGAINED = 1` or yards gained ≥ distance.
- **EPA:** `pff_EXPECTEDPOINTSADDED` as provided. Passing EPA is attributed to the targeted receiver.
- **Target:** a pass play with a recorded receiver, excluding sacks and scrambles. **Receiving yards:** yards gained on completions.
- **Explosive:** runs of 10+ yards, passes of 20+ yards.
- **Field zone:** `ABSOLUTEYARDLINE` is yards to the opponent's end zone (so 1–20 is the red zone).
- **Tell:** a pre-snap cue (personnel, alignment, down, distance, or combinations) with at least 10 plays where one play type reaches 80%. The 95% lower bound uses a Wilson interval.
- **Intervals:** rates show 95% Wilson intervals; run-concept EPA shows ±1 standard error. With samples this small, most differences between groups are not statistically distinguishable; the report shows n everywhere so readers can judge.
- **Garbage time** excluded: TRUE. **2-minute drills** excluded: FALSE. **Personnel "(*)"** marks a jumbo package (an extra offensive lineman replaces a skill player); merged into the base grouping: FALSE.

Data checks:

- Player names from NYG_2026_roster.csv (nflverse weekly rosters 2026)

Blank numeric cells (for example yards after catch on runs) are expected and listed for completeness.
